

Holey Openings

Holey Openings

Release of Liability

Unit: _____ Commander: _____

Container info: _____
Make, drawers, class, SL/ML, legal/letter/IPS/VD/M&P, ser. #

1. Begin service: Holey Openings will make every attempt to neutralize a locked out safe or vault in a manner that the container can be repaired and reused. Black label containers are forbidden from retaining GSA certification once neutralized. A cleared representative from the requesting unit will remain with the Holey Openings contractor throughout the process. Holey Openings will not be held liable for damaged items within a GSA container as a result of neutralization. The undersigned authorizes the neutralization process and accepts full responsibility for the container and items stored within the container.

Name (RANK First Last) Signature Date Time

2. Consent to CONTINUE: Every attempt to neutralize the container and retain certification has failed. Continued efforts will result in container decertification. All material located within the location must be relocated once the container is open, or appropriate guard force enacted to maintain security of the items. The undersigned acknowledges that continued work will decertify the safe and requests work to **CONTINUE**:

3. Request to STOP: Every attempt to neutralize the container and retain certification has failed. Continued efforts will result in container decertification. All material located within the location must be relocated once the container is open, or appropriate guard force enacted to maintain security of the items. The undersigned acknowledges that continued work will decertify the safe and requests work to **STOP**:

Name (RANK First Last) Signature Date Time

4. Service complete: The GSA container has been neutralized and repaired (if applicable and practical). Items within the container have been accounted for. Any discrepancy in the items will be reported to the unit commander/director and military police for appropriate action. Lock combination will remain at default, 50-25-50, until unit personnel reset the combination and record it on SF-700.
